

48v electric motor drives air compressor

What is 48V DC compressor?

The 48V dc compressors are widely used in truck cabin air conditioner, hybrid APU, solar air conditioner, telecom air conditioner, mobile refrigeration and so on. 48V compressor is a dc inverter rotary compressor which is powered by 48V battery or 48V power mode.

What is a 48 volt electric drive system?

The 48 V electric drive system from MAHLE consists of a liquid cooled permanent magnet electric motor with an integrated controller and is ideal for P2 and P3 applications in hybrid electric vehicles. The compact, lightweight and high efficient system with 20 to 40 kW power enables purely electric driving without the need of a high voltage supply.

What type of motor does an air cooled system have?

It consists of a silent electric motor with an integrated controller or additionally with a reduction gear and differential. From 24 to 80 V and 19 to 40 kW the air- or liquid-cooled system is equipped with an AC induction or permanent magnet motor and drives systems developed according to ASIL C (ISO 26262).

What is a 48V mild hybrid drive system?

The system satisfies all 48 V automotive standards and is designed according to ASIL C (ISO 26262) to match high functional safety requirements. The investment in development of new 48V mild hybrid drive systems is co-financed by the Republic of Slovenia and the European Union, European Regional Development Fund. For more see:
