

Aqua lung rigging and drilling

How does Aqua Lung work?

The Aqua-Lung is a self-contained open-circuit demand system, which means that breathing gas is provided from high-pressure storage carried by to the diver on demand, when the diver inhales and reduces the pressure in the supply hose, subsequently the flow is shut off when not required. Once breathed, the exhaled gas is vented to the surroundings.

Is Aqualung a Spirotechnique?

Aqualung Group (formerly Aqua Lung International, and prior to that La Spirotechnique) is a manufacturer of self-contained breathing apparatus and other diving equipment. It produced the Aqua-Lung line of regulators, including the CG45 (1945) and the Mistral (1955).

What is Aqua Lung?

Aqua Lung's Details collection is released; it is the first complete line of women's dive products designed by women for women. Along with the newly acquired Pelagic Pressure Systems, Aqua Lung releases its new line of dive instrumentation. Aqua Lung celebrates 75 years of discovery with the 75th Anniversary of the Aqua-Lung.

Aqua lung rigging and drilling

Overview Invention and patent Mechanism Competition Trademark issues See also External links An earlier underwater breathing regulator, known as the *gulateur*, was invented in France in 1860 by Benoît Rouquayrol. He first conceived it as a device to help assist in escaping from flooded mines. The Rouquayrol regulator was adapted to diving in 1864, when Rouquayrol met the lieutenant de vaisseau Auguste Denayrouze. The Rouquayrol-Denayrouze apparatus went into mass production and commercialization on 28 August 1865, when the French Navy Minister ord...
