What DTH drilling tools do you offer?

We offer a complete range of DTH drilling tools including hammers, bits, pipes, adapters, breakout benches and grinding machines with consumables. The history of the down-the-hole hammer manufacturing goes back more than four decades. For the past 40 years and still today, our goal is to produce the best products for our customers.

How does DTH drilling work?

DTH drilling is most suitable for hole diameters of 4-10 inches, with some exceptions. The DTH hammer is pneumatically powered, with the compressed air propelling it forward to impact and fracture rock. Compressed air also travels through the drill bit into the hole (air exhaust), which blows the chips and dust out of the hole.

Why is DTH drilling better than top hammer drilling?

DTH drilling offers several advantages over top-hammer drilling for larger, deeper holes in medium-hard formations. Because the hammer is at the bottom of the hole, power loss is minimal as the hole deepens.
