

## Bc drilling rig list

What is the BC Oil and gas industry?

While not as prominent as the oil sands in Alberta, BC has significant hydrocarbon resources, including both conventional and unconventional reserves. The industry encompasses various activities, including exploration, production, refining, and transportation of oil and natural gas. Here are some key aspects of the BC oil and gas industry:

Does BC have oil sands?

The oil and gas industry in British Columbia (BC), Canada, plays a notable role in the province's economy. While not as prominent as the oil sands in Alberta, BC has significant hydrocarbon resources, including both conventional and unconventional reserves.

Does BC have natural gas?

The B.C. portion of this basin contains mostly natural gas, with limited oil deposits. Gas and oil production in B.C. began in the mid 1950s. Vertical wells targeted highly porous formations which would flow gas and oil. These are now referred to as "conventional resources".

What happened to oil & gas production in northeast BC?

These interactive graphs show past activity levels of drilling and production in northeast B.C., the location of oil and gas activity in the province. Activity levels and production were relatively stable for a decade prior to 2003, due to several factors including Deep Basin development followed by horizontal unconventional development.

How many wells have been drilled?

Wells on Location: 3890 Wells Spud / Drilling: 4 Wells Suspended: 36 Wells Resumed / Drilling: 7 Wells Rig Released: 3 Wells Total: 3940 List of Wells Authorized to Drill or Drilling Land Type P = Private C = Crown B = Both Crown and Private

When did BC start producing gas & oil?

Gas and oil production in B.C. began in the mid 1950s. Vertical wells targeted highly porous formations which would flow gas and oil. These are now referred to as "conventional resources". Since around 2005, development activity has been predominantly in "unconventional resources".
