

# Blockchain platform for automated drilling rig systems architecture

The adaptability of a particular blockchain-based platform in the oil and gas industry is affected by the security and privacy requirements of participating organizations, blockchain ...

The work illustrates its performance through self-coordinating state transition, Rate of Penetration (ROP, drilling speed) optimization capability, formation classification, and drilling ...

ng accuracy efficiency. Therefore, in keeping with SPE Drillbotics" competition purpose, the UVU team to add to the rese n automated drilling rig would reduce human error, m ...

Diamond Offshore Drilling recently announced the launch of its Blockchain Drilling service, the first application of blockchain technology in the offshore drilling industry. This ...

In the example of the drill pipe connection improvements on the Texas rig, the simple fact that the performance contract was put onto a ...

Today"s systems, approaches, and technologies leveraged for managing oil and gas supply chain operations fall short in providing ...

Digital transformation is reshaping the oil and gas industry. As companies adopt AI, IoT, and automation, they face challenges in aligning ...

For this condition the blockchain technology based framework with distributed ledger technologies will provide an option to integrate various applications at the database level. Also it provides ...

Sandvik intelligent control system architecture Sandvik Intelligent Control System Architecture (SICA) is the foundation for developing Sandvik"s onboard and remote technology and ...

We discuss several blockchain-based systems for various oil and gas industry use cases to identify the system components, participants, role definition, and information flow ...

The PACE&#174;-R801 concept rig has safety and efficiency at the core of its design, purpose-built to showcase Nabors technology and to push the boundaries of industry performance and ...

As global energy industries undergo digitalization, automated drilling rigs have emerged as key players of a smart oilfield revolution. These ...

# Blockchain platform for automated drilling rig systems architecture

The Company's Blockchain Drilling service provides an immutable platform for the optimization of well construction activities, including drilling ...

Halliburton LOGIX(TM) automation and remote operations, combined with Nabors' SmartROS &#174; rig operating system, form a unified platform that enables ...

Core drilling has been widely used in mineral exploration with diamond-impregnated drilling technology. Automation is a critical technology ...

This article aims to provide an overview of research trends and state-of-the-art technologies in face exploration and drilling operations in order to define the vision toward the ...

Discover how LOGIX&#174; autonomous drilling platform integrated with geosteering software provides insight and recommendations to successfully land the well.

The report noted that intelligent, automated drilling systems demonstrably have a huge impact on the drilling rig count and cost per well drilled as they require fewer on-site ...

Automated drilling systems possess sensors and data analytics functionalities that provide real-time observation of drilling parameters. This allows operators to obtain extensive data ...

Our drilling rig and drill ship automation systems help companies improve accuracy, reduce cost and increase uptime while maintaining safety. We offer a wide range of proven, robust ...

New Papers Show Automated, Autonomous Drilling Systems Headed in Right Direction New case studies highlight how artificial intelligence, advanced hardware, and ...

As a proof-of-concept modeling, a smart contract is developed and validated on a blockchain test platform. A comparative analysis shows the advantages of using blockchain ...
