

Boremaster jr portable drilling rig reviews rated

Does the boremaster water drilling machine pay for itself?

Because water is fast becoming a scarce commodity, water drilling is becoming the name of the game. The Boremaster Drilling machine has proved to be successful throughout South Africa, Mozambique, Namibia, Botswana and Zimbabwe. A case study has shown that the Boremaster Water Drilling Machine pays for itself after the 3rd hole drilled.

What type of drilling method does a boremaster use?

A: The BoreMaster features the rotary drilling method, the most modern method of drilling for water today. It is fast and efficient and until recently it was only available in large, expensive, truck rigs.

What are the advantages of a boremaster rig?

The biggest advantage of the BoreMaster is that it is portable and lightweight, easily transported into back yards, hunting camps, gardens, under trees, etc., and unlike the big truck rigs, it doesn't destroy the landscape. Q: What is the difference in these portable rigs, and the big truck rigs, can you drill as good a well as the big trucks do?

How deep can a boremaster rig Drill?

A: The BoreMaster Standard Rigs are capable of depths up to 300 feet deep, although the average depth of most water wells is less than 100 feet. Many good water bearing formations are located at around 50 to 75 feet. Is it possible to drill deeper than 300 feet? It is possible, but other factors will need to be considered.

How does a boremaster drill work?

The BoreMaster consists of a rotary drill powered by a gasoline powerhead with an earth cutting bit attached to a five foot length of hollow drill stem. As the bit cuts into the earth, water is pumped through the drill stem with the high pressure mud pump and out at the bit, washing the cuttings up and out of the borehole to the surface.

How does a water bore rig work?

Water bore rigs use a small diesel motor to drive the drill rig, while the real work is done by a separate 8V92 powered compressor that supplies air to the percussion boring head and blows the hole clean as it is bored. The new 8V92 compressor is twice as fast as the previous 350 Hp 6V92 compressor.

Explore portable borehole drilling machines for small projects in our guide. Learn how to choose the right equipment and even rent a laptop for ...

This machine mainly used for geothermal drilling, farm irrigation, house yard, gardens and water well drilling. It also can be used in small building piling, like ...
