How does a cable drilling rig work?

It is a very old technique, slow but steady and only requires one person to operate the rig. A derrick is raised to support the cable tool. The cable tool is a drilling "bit" that is repeatedly raised and dropped in the hole to break up any formation encountered. Then the cable tool is swapped out and a bailer is lowered into the hole.

What is a standard cable tool rig?

A standard cable tool rig is a type of drilling rig that uses percussion drilling. Its drill string is composed of the bit, drill stem, jars, and a rope socket enabling their attachment to the drilling line or cable. Although these rigs have been almost completely replaced by lighter, more portable models, the standard rig is still considered the yardstick of percussion drilling.

Where did cable tool rigs come from?

Cable tool rigs were originally used in the United States for drilling water wells in the early 1800s but had their origins in the percussive drilling techniques used by ancient Chinese and Persian civilizations. They were adapted in the mid- to late-1800s for drilling hydrocarbon wells.

What is a cable tool drilling process?

The cable tool drilling process typically consists of drilling, removing the cuttings, identifying the geology, monitoring the waterflow, if present, and then advancing the casing. There are two methods for casing advancement, the drive cap and the drive blocks.

What is a cable drill?

This technique is used by some commercial drillers. It is a very old technique, slow but steady and only requires one person to operate the rig. A derrick is raised to support the cable tool. The cable tool is a drilling "bit" that is repeatedly raised and dropped in the hole to break up any formation encountered.

How do you drill a cable?

Cable-tool drilling is done by raising and dropping a string of tools on the end of a cable. The up and down motion is imparted by the walking beam. The tools are pulled from or lowered into the hole by winding or unwinding the drill cable on the bull wheel. Casing is raised or lowered by the casing line and calf wheel.
