Why is a drilling system not used on every drill hole?

The system is operated by a geophysical contractor and the procedure requires cooperation from the drill operators because some of the drilling equipment usually stays in the hole to keep it open. This adds to the expense of doing downhole surveys, which is why they are not typically used on every drill hole.

How do explorers use drill holes?

Explorers use drill holes to collect core or rock chips, to 'map' the rock types down the hole and often send rock chip samples for geochemical analysis. To extract the most value from a drill program, it's best to also do a geophysical survey of the hole to measure the physical properties of the rocks in place.

What is down-the-hole (DTH) drilling?

Down-the-hole (DTH) drilling has made it easier for contractors to drill wells faster and more efficiently, and to transition from dirt boring to rock boring just by adding a compressor and hammer to the drill bit.

How does a down-the-hole drill work?

Down-the-hole drills consist of various components such as hammers, bits, and pipes that work together to create boreholes. The hammer delivers rapid blows to the bit, while air pressure removes debris from the hole. These tools are designed to withstand high-impact forces and provide exceptional performance in challenging environments.

Why should you service your core drill?

Regular servicing can extend the life of your equipment and improve its reliability, which can reduce the need for costly repairs and prevent the loss of fee-earning work if the drill becomes irreparable. Remember to wear these four items when core drilling.... Do's and Don'ts

What are the advantages of using down-the-hole drilling tools?

The advantages of using down-the-hole drilling tools are numerous. They offer faster penetration rates and lower energy consumption compared to other methods, making them ideal for large-scale projects. Additionally, DTH drills are versatile and can be used in a wide range of geological formations, from soft soil to hard rock.
