What is a can-ductor rig?

The CAN-ductor mitigates a series of common top-hole risks, as the rig only needs to cut the surface casing before leaving the location. A light vessel is then able to retrieve the CAN. The CAN-ductor can be engineered with other CAN technologies for the ultimate subsea wellhead foundation.

Does neodrig's can-ductor technology reduce a well's environmental impact?

Neodrig's CAN-ductor technology is capable of reducing a well's environmental impact by as much as 44% compared to a conventionally drilled well, a recent report found. The CAN (Conductor Anchor Node) is a combination of suction anchor and guide pipe.

Why should you build a can-ductor solution onshore?

By building CAN solutions onshore it enables us to ensure quality and complete tasks that would traditionally be done at higher costs offshore. CAN-ductor has an unrivalled capacity to facilitate shallow kick-off, having been field proven in the Barents Sea for a horizontal well with top reservoir at 250 m.
