What are the technical parameters of a screw air compressor?

What are The Main Technical Parameters of The Screw Air Compressor? Displacement (m<sup>3</sup>/min): It refers to the volume of air discharged by the compressor per unit of time, also known as flow rate or volumetric flow rate. Discharge pressure (MPa): It indicates the pressure of the air at the compressor's outlet, usually measured in megapascals (MPa).

What is a screw compressor?

The traditional screw compressor is specially designed for continuous operation(24/7 continuous operation) and proves its efficiency with a daily compressed air requirement,around the clock. This design proves to be extremely advantageous,especially in industrial applications.

What are the components of screw air compressor?

Screw air compressor is the main components of screw head,the separation of oil and gas cylinder. Screw suction filter through the nose and suction inlet control valve,oil also inject compressed room,a cooling of the nose,while the screw and the bearings lubricated by compressed air pressure that is generated.
