Screw air compressor is divided into air cooling type and water cooling type, through the fan or water forcing cooling. Air cooling system consists of cooling fan, oil coolers and air cooler. The cooled air is pumped into the fan; go through oil cooler and air cooler, and at the same time, cool and compressing lubricating oil and air.

What is a screw air compressor?

Air compressor is modular in design, screw rotor, oil and gas separation extinguishers, coolers, are installed in a motor, within the framework of acoustic enclosures through the noise of rubber materials. Screw air compressor is the main components of screw head, the separation of oil and gas cylinder.

How to install air compressor?

The ground is best to be smooth cement floor. The air compressor base should be placed at 0.5/1000 (mm). And there should be grooves around and on the platform, and then the oil and repairing or washing the ground. The size of the groove is decided by the user. 3. Make sure the bottom of the compressor is placed evenly on the platform, which can

What is a screw-type air compressor?

Screw-type air compressor structure of a unique design, a compact, stylish appearance, high efficiency, small energy consumption, low noise characteristics and long life, is a smart environment-friendly products. Is widely applied in metallurgy, machinery, chemicals, and mining, and electric power industries of the ideal gas source equipment.

How to adjust air compressor?

Air compressor used automatic correction system, so as long as the guarantee of a pulley in the same plane. First head of the pulley fixed in the right position, then adjust the motor on the belt at the same level surface. When the motor or nose been moved or re-installed, the patch must be re-coupling of.

What are the components of screw air compressor?

Screw air compressor is the main components of screw head, the separation of oil and gas cylinder. Screw suction filter through the nose and suction inlet control valve, oil also inject compressed room, a cooling of the nose, while the screw and the bearings lubricated by compressed air pressure that is generated.
