

China's Downhole Drilling Methods

We are capable of providing operations and services such as well intervention, overhaul, sidetrack drilling, fracturing and acidizing, and formation testing. Our customers are from over ten ...

In the dynamic world of oil and gas exploration, choosing the right drilling jar manufacturer can make a significant difference in your operations. As we navigate through 2025, the industry's ...

Widespread deployment of automation-integrated downhole systems, including directional drilling technologies, increased drilling efficiency by 26% in horizontal wells from ...

The paper also presents the breakthroughs and applications of high-end equipment, cutting-edge tools and core downhole fluids developed to overcome these ...

Abstract This paper provides an overview of the common drilling methods and their applications in geology and engineering. The five-drilling methods discussed in the paper are auger drilling, ...

In conclusion, this study will help improve the ability and level of drilling ultra-deep wells and provide support for oil and gas exploration and development services in China.

We offer an extensive range of downhole equipment engineered to meet the challenges of today's drilling environments. Our tools deliver precision, durability, and efficiency, ensuring smooth ...

ile casing stays downhole. The technology provides an effective drilling method for drilling construction in the depleted reservoir, formation with high differential pressure and fractured ...

The present article analyzes the technological advancement and innovations related to drilling operations. It covers the review of currently ...

4 Changqing Downhole Technology Company, CNPC Chuanqing Drilling Engineering Company Limited, Xi'an, 710018, China. 5 State Key Laboratory of Petroleum ...

Since the 12th Five-Year Plan, China National Petroleum Corporation ("CNPC") has worked systematically on the challenges to drilling and completion of deep and ultra-deep ...

In this fi paper, a drilling risk pro le (depth domain) rich in geological and engineering information is constructed fi by introducing a quantitative evaluation method for drilling risk of drilled wells, ...

Through real-time acquisition of drilling parame-ters and automatic intelligent recognition of downhole

conditions by a built-in software, the smart driller indicator could make realized the ...

Downhole Tools Market to grow at a CAGR of 4.77% by Implementation of new technology in the mature wells and increased shale oil and gas drilling ...

The differences between the air rotary system and this drilling system are primarily the cutting action and the resulting cuttings, as shown. The down- the-hole hammer uses the rotary ...

Drilling complications, which are usually hard to be discovered in time using the traditional surface detecting methods, result in much time and money wasted in handling these ...

Realizing automatic and real-time identification with whirling is of great significance to save non-productive time and ensure drilling safety and benefit. In this paper, we first ...

The research results of this paper provide an accurate wellbore temperature field prediction method for ultra-deep directional wells in the Shunbei block, China, which is of great ...

In the period of "13th Five-Year Plan", domestic deep and ultra-deep oil/gas well drilling technologies were developed quickly and a great number of technological ...

The exploration and development of resources and energy are fundamental to human survival and development, and geological drilling is a ...

“At depths surpassing 10,000 meters, a series of extremes relentlessly tests the boundaries of China's ultra-deep drilling technologies and downhole tooling systems. Drilling ...

DTH is short for "down-the-hole". Since the DTH method was originally developed to drill large-diameter holes downwards in surface-drilling applications, its name originated from the fact ...

To monitor the drilling process in real time and enhance the efficiency of target detection at underground coal mine drill sites, an improved algorithm based on Yolov8n has ...

Gas drainage and water detection and release by drilling are essential to prevent gas and water disasters in China. The accurate drilling depth substantially affects gas ...

Abstract. In geological drilling processes, downhole incidents usually pose a serious threat to drilling safety. In order to improve the performance of drilling safety monitoring, a systematic ...

Directional drilling Directional drilling techniques enable drillholes to be steered in a controlled direction to either drill to a pre-planned path or control natural ...

China s Downhole Drilling Methods

How to exploit efficiently unconventional hydrocarbon has become an important step to solve the problem of increasing reserve and production of oil & gas in China. Aiming at ...

In drilling processes, faulty downhole conditions often lead to drilling performance degradation and even serious accidents, such as the blowout, and well collapse. To improve ...

Down-the-hole (DTH) drilling is a method used to drill boreholes in hard rock formations for various applications such as mining, construction, and quarrying. This technique involves a ...

A downhole drilling system for reducing impact of vibration comprises a drill string having a bottom hole assembly (BHA) and a controller configured to control the downhole drilling system. The ...

<p>As oil and gas exploration and development shift to unconventional, low permeability, deep formations, deepwater and other complex hydrocarbon resources, drilling engineering is facing ...

Readers can expect to gain a comprehensive understanding of the various drilling methods employed in China, including rotary and directional drilling. The guide will also cover ...
