What is a lubricated rotary screw air compressor?

Lubricated rotary screw air compressors are used every day across the world in a wide variety of applications, from the small 2 kW model you may find in a garage or workshop, up to large 250 kW models where multiple machines used together can power a whole factory production line.

Are rotary screw air compressors oil-free?

Fixed and regulated speed rotary screw air compressors CompAir has launched a completely new range of high efficiency, oil-free two-stage rotary screw compressors to further enhance its successful and award winning D-Series. These high output oil-free machines now cover a wide flow range from 5.1 to 23.52 m³/min.

How much power does a rotary screw compressor produce?

CompAir's rotary screw range operates between 4kW to 250 kW (5 to 335hp), producing working pressure at 5 bar to 13 bar (72 to 188psi). Our range of injected screw compressors are available with fixed or variable speed drives. The benefits of both depend on the unique demand of your business.

How does a screw compressor work?

A screw compressor can run loaded ('pumping air') or unloaded ('idle'). The inlet/loading valve opens and closes according to air demand. The inlet valve is controlled by a solenoid valve that supplies control air to the inlet/loading valve. Check solenoid valve coil and solenoid valve operation.

Why should you choose a screw compressor?

One of the main benefits of choosing a screw compressor is that, in comparison with piston compressors, there are no valves or other mechanical forces that can cause the compressor to become unbalanced. This allows a screw compressor to provide quality air at high operational speeds with a larger flow rate, without compromising on compact design!
