

Core Drill Installation Video

How do you use a core drill?

Start with a pilot hole: It is generally recommended to start drilling by creating a small pilot hole. This will help guide the core drill and prevent it from wandering or slipping during drilling. Maintain good posture: When using a core drill, stand in a stable position with your feet shoulder-width apart.

What materials are drilled using a core drill?

Concrete: Concrete is one of the most common materials drilled using a core drill. It is a highly durable and strong material, and drilling into it requires a special diamond-tipped core drill bit. Concrete core drilling is commonly used in construction projects to create openings for pipes, conduits, and vents.

How do I assemble a drill rig?

Select a core bit size suitable for the desired hole diameter. Core bits are available in various sizes, typically ranging from 1 inch to 12 inches or more. Assemble the Drill Rig: Next, assemble the drill rig, also known as the drill stand or anchor rig. This is the structure that supports the drilling process and provides stability.

How to use a concrete drill machine?

Here are the points to remember while using a concrete drilling machine: Always remember forces on the drill machine are always high; therefore, it is important to: Ensure there is no lost coring drill bit or any sign of cracking. Stop and check for obstruction if the core drill shakes too much.

Why do core drillers use a stand?

Core drillers use stands for difficult positions. Setting up the stand takes time, but it makes handling the drill easier and ensures precise holes. The installation setup takes time because anchors are needed to fix the drill stand. For concrete projects, rock anchors are used, while in brickwork, metal tubes with Rawl-dowels work best.

What should I do if my core drill is broken?

Always remember forces on the drill machine are always high; therefore, it is important to: Ensure there is no lost coring drill bit or any sign of cracking. Stop and check for obstruction if the core drill shakes too much. Always make sure to use water to clear the path and use manual obstruction removal.
