

What is up weight & down weight in drilling?

The converse is Up Weight, i.e., when moving the drill string upwards. Every driller knows that the up weight reduces and the down weight increases when he starts rotating the string. Torque and Drag In Drilling Optimization). Rotating Weight is measured while rotating off the bottom without reciprocating.

What is an offshore drilling rig?

Offshore drilling rigs have similar elements, but are configured with a number of different drilling systems to suit drilling in the marine environment. The equipment associated with a rig is to some extent dependent on the type of rig but typically includes at least some of the items listed below.

What is a drilling rig?

The term "rig" therefore generally refers to the complex equipment that is used to penetrate the surface of the Earth's crust. Small to medium-sized drilling rigs are mobile, such as those used in mineral exploration drilling, blast-hole, water wells and environmental investigations.

What type of drilling rig is used in underground mining?

Underground mining (hard rock) uses a variety of drill rigs dependent on the desired purpose, such as production, bolting, cabling, and tunnelling. In early oil exploration, drilling rigs were semi-permanent in nature and the derricks were often built on site and left in place after the completion of the well.

What are oil and natural gas drilling rigs used for?

In the background are the Discoverer Enterprise, GSF Development Driller II, and Helix Producer I Oil and natural gas drilling rigs are used not only to identify geologic reservoirs, but also used to create holes that allow the extraction of oil or natural gas from those reservoirs.

How are drilling rigs classified?

Drilling rigs are classified based on multiple factors like Drawworks horse power, maximum load capacity, drilling depth capacity, location they drill or specific type of operations they can perform. A Blow Out Preventer commonly known as BOP is a large valve placed on top of a well. As the name suggests, BOP is used to prevent a blowout in a well.
