

Cts turns over a drill rig in north carolina

How does CTS technology affect drilling operations?

Using CTS technology has major impact on the viability of drilling operations, especially in environmentally sensitive areas. Top-hole instability can threaten the integrity of the entire well structure. The top-hole section is the structure that the rest of the well relies on.

What is cutting Transportation System (CTS)?

Move your cuttings away from the spudding location to avoid cuttings buildup and enable drilling in environmental sensitive areas. The Cutting Transportation System (CTS) enables you to take cuttings away from the well area during top-hole drilling on semisubmersible rigs, as well as during clean-up operations on the seabed.

What is a CTS rig?

The modular design of the CTS enables easy installation on most rig types. It is designed to run for long periods of time without maintenance and be able to pump large particles without blockages occurring. The pump was designed to run underwater with discharge occurring 2km (1.2 miles) away.

What is the CTS of Asheville Superfund site?

COMMUNITY UPDATE INFORMATION SHEET CTS of Asheville, Inc. Superfund Site Asheville, Buncombe County, North Carolina The CTS of Asheville, Inc. Superfund Site (CTS site) is located on Mills Gap Road in Asheville, Buncombe County, North Carolina, and also includes the areal extent of contamination.

What is CTS technology?

It is based on proven technology used in the offshore market for more than a decade. Using CTS technology has major impact on the viability of drilling operations, especially in environmentally sensitive areas.
