

Deepwater drilling rig choke manifold

CORTEC Compact Choke Manifolds offer precise flow control capability while optimizing the use of deck space on a rig. CORTEC chokes, available in up to 6" orifice, are field proven to offer ...

The buffer manifold is designed to route flow without the need to reconfigure piping. The buffer manifold can be used as part of advanced drilling systems, either in a riser gas handling ...

This combination provides a system that is already in place to safely divert fluids containing gas away from the rig floor and toward an automated managed-pressure drilling ...

A partnership between a drilling contractor and an OFS provider is taking MPD systems, which are fully owned and operated by the drilling contractor, to the ...

Tier II MPD Manifold Our Tier II managed pressure drilling manifolds provide the rig with the highest measurement accuracy and redundant choke legs ...

Unlock the complexities of drilling rig operations with our comprehensive guide on the Difference Between Choke and Kill Lines. Gain ...

If the casing pressure can't be measured at the wellhead, the choke line valve is opened with the choke or adjacent high-pressure valve ...

We proudly supply high-performance Choke & Kill Manifold Systems tailored for both onshore and offshore drilling applications. Each unit is designed for seamless integration, reliable pressure ...

To direct the drilling fluid from the well in to the buffer tanks through adjustable chokes, drilling chokes or freely, in order to obtain a controlled reduction of the ...

In a deepwater CLD setup, the RCD serves as a barrier between the well and the rig floor. The RCD contains and diverts annular fluid returns and gas kicks from marine risers to the ...

After decades of building and operating topside equipment, we developed a best-in-class design that fits any rig-floor footprint and offers customization to well, rig, and operator needs. In ...

Choke Manifold Component in Drilling Rig The BOP can close in the well but additional equipment is needed to allow controlled release of the ...

This section will describe how to compensate the choke line friction while bring pump up to speed. Choke line

Deepwater drilling rig choke manifold

friction pressure will increase bottom hole pressure while ...

The choke manifold typically functions to control the flow of drilling mud or other fluids into or out of the wellbore to reduce pressure. The kill ...

Closing the BOP (shut-in), and use of the rig's choke manifold to circulate the kick out of the hole are possible initial responses for all previously described ...

In many cases the choke manifold is supplied by the drilling contractor, and is part of the fixed rig equipment. When a mobile rig is brought to a location it is the responsibility of ...

Deepwater drilling rig choke manifold
