

Demin screw air compressor password

How does a screw air compressor work?

Screw air compressor is divided into air cooling type and water cooling type, through the fan or water forcing cooling. Air cooling system consists of cooling fan, oil coolers and air cooler. The cooled air is pumped into the fan; go through oil cooler and air cooler, and at the same time, cool and compressing lubricating oil and air.

How does a commitment air compressor work?

Commitment air compressor equipped with remote control devices, the air compressor to provide a safe, low-speed, remote control operation. On the system to provide a live /remote control selection switch, an AC adapter 220/24 provide 24 V power to control the start /stop device.

How to check if a compressor is working properly?

2? Press the "start" button, the compressor can be work according to the set mode. At this time, observe whether normal of the display panel, pressure temperature, or abnormal sound, oil leakage. If there is abnormal, stop and check immediately. 3? When press the "stop" button, the machine will stop after finishing unloading. It is normal

What is a screw air compressor?

Air compressor is modular in design, screw rotor, oil and gas separation extinguishers, coolers, are installed in a motor, within the framework of acoustic enclosures through the noise of rubber materials. Screw air compressor is the main components of screw head, the separation of oil and gas cylinder.

How to adjust air compressor?

Air compressor used automatic correction system, so as long as the guarantee of a pulley in the same plane. First head of the pulley fixed in the right position, then adjust the motor on the belt at the same level surface. When the motor or nose been moved or re-installed, the patch must be re-coupling of.

What happens when air compressor pressure drops?

When the pipeline pressure dropped to set the load pressure, the air compressor return to the loading state. Electromagnetic valve power, the intake valve open, the pressure increased. Based on the needs of compressed air, repeat cycle of the process.

In BLOCK mode, one compressor will start or load when master AIR P is below this set data In BLOCK mode, one compressor will stop or unload when master AIR P is above this set data In ...
