

Diesel air compressor idle speed adjustment

How do you adjust a low idle speed?

To adjust the low idle speed on a diesel engine, follow these steps: 1. Locate the idle speed adjusting screw. 2. Place the transmission in NEUTRAL or PARK. 3. Rev the engine momentarily. 4. Place the transmission in the specified gear and check the low idle RPM. 5. Adjust again if necessary to match the specification on the Vehicle Emissions Control Information (VECI) decal.

How do you adjust the fast idle RPM?

To adjust the fast idle RPM, first check the current setting. It should be 825 ± 25. Then, turn the solenoid plunger in or out to meet the specification. Rev the engine and check the fast idle RPM, adjusting as necessary.

How to adjust idle speed if engine is too hot?

Do not adjust idle speed when engine is too hot, e.g. immediately following a fast ride or after measuring output on output dynamometer. 1. Switch off air conditioner or automatic climate control. Move selector lever in position "P". 2. Connect revolution counter. Use adaptor when connecting mechanical revolution counter. 3.

Where is the low idle speed specified?

Low idle speed is specified on the Vehicle Emissions Control Information (VECI) decal. Check low idle speed, using Rotunda 055-00108 or equivalent. Adjust to specification using idle speed adjusting screw. 6. Place transmission in NEUTRAL or PARK. Rev engine momentarily. Place transmission in specified gear and check low idle rpm.

How to adjust engine speed?

Adjust engines according to data of respective emission control information plate. Do not adjust idle speed when engine is too hot, e.g. immediately following a fast ride or after measuring output on output dynamometer. 1. Switch off air conditioner or automatic climate control. Move selector lever in position "P". 2. Connect revolution counter.

How do you check the low idle speed?

To check low idle speed, follow these steps: 1. Place transmission in NEUTRAL or PARK. 2. Rev engine momentarily. 3. Place transmission in specified gear. 4. Check low idle rpm using a tachometer. The low idle speed is specified on the Vehicle Emissions Control Information (VECI) decal.
