

Diesel air compressor pressure gauge

How does a compressor pressure gauge work?

The tank pressure gauge needle will display a lower pressure when the compressed air is being used, and then will increase rapidly when it falls to the cut in pressure as the pressure switch makes the compressor cut in to generate more compressed air. The second compressor air gauge displays the pressure setting of the air regulator.

What is a second compressor air gauge?

The second compressor air gauge displays the pressure setting of the air regulator. This pressure setting is the air pressure which the air compressor user wants to send down the air line to the pneumatic tool.

What gauges do air compressors have?

The two gauges on your compressor will be the tank and regulator gauges. The tank gauge displays the air pressure level that is in the compressor tank and the regulator gauge displays the pressure setting of the air regulator which is adjusted for your desired application. What pressure should my air compressor be set at?

Do you need an air pressure gauge?

When using an air compressor at your job, you will want to know just how much air pressure is being exerted; that is why you need a properly working air pressure gauge. These air pressure gauges are simple to install and will let you know how much air your air compressor uses by its PSI gauge.

How do I know how much air my air compressor uses?

These air pressure gauges are simple to install and will let you know how much air your air compressor uses by its PSI gauge. Once you are ready to pick one up for your machine, you will need to figure out how much the maximum PSI is on your air compressor or the job you are using it for and pick the correct air pressure gauge to fit your needs.

What is the pressure range of air compressor gauge?

Pressure Range: The air compressor gauge should have a range twice the working pressure for maximum safety and accuracy. The operating pressure range should be limited to 75% of the gauge range. **Pressure Unit:** The general pressure unit for the air compressor gauge is psi.
