What is a cylinder head in an air compressor?

As the name implies, a cylinder head sits at the top (head) of an air compressor pump. Its purpose is to route air through the compressor and to dissipate heat. Although it is uncommon for a cylinder head to deteriorate with normal use, damage from accidental impacts (such as dropping the unit) would necessitate replacement.

How do you install a compressor head?

Align the valve plate assembly (and cylinder gasket) with the compressor pump. (The cylinder gasket and the exposed valves should be facing the cylinder-side of the pump.) Align the head gasket with the valve plate assembly. Install the cylinder head. Install the head bolts.

What is the function of a compressor head?

The compressor head is one of the vital components of your compressor and the part that drives the entire mechanism. When it comes to the repair of this key piece, trust high-quality products and experienced technicians, like those at Compressed Air Systems.

How do you remove a cylinder head from an air compressor?

**DEPRESSURIZE THE AIR TANK.** Always depressurize the tank before servicing an air compressor. To do this, open the drain valve and wait until all of the air (and pressure) has escaped. **REMOVING THE CYLINDER HEAD** [top] 1. Remove the manifold cover. Remove the retaining screw. Lift the manifold cover away from the unit. 2.
