

Does the screw air compressor have water volume video

How does a screw type compressor work?

Screw type compressors have two interlocking helical rotors within its housing. Air from the surroundings is introduced into the compressor through the inlet valve (blue), and is trapped between the two rotors. The screws turn and "compress" the air, reducing the volume while increasing the pressure of the air (red).

How much water does a rotary screw air compressor produce?

For example, a 110kW (150HP) rotary screw air compressor which operates in 27 °C temperature with 75% relative humidity (Ho Chi Minh average temperature) will produce 120 liters of water per day. For factories that are located near the ocean, the amount of water produced might be even higher.

What is a rotary screw air compressor?

A rotary screw air compressor is one of the two types of positive displacement gas compressors. It uses two rotors to create the pressure needed for air compression. They are one of the easiest types of air compressors to use and maintain. The other type of positive displacement compressor is the reciprocating or piston compressor.

How does a water compressor work?

For factories that are located near the ocean, the amount of water produced might be even higher. As discussed above, the compressor takes in air from the surroundings and compresses it, increasing its pressure for end-use application.

How does an oil flooded compressor work?

In an oil-flooded compressor, oil is used to create a tight seal between the rotors and the housing walls to trap air within the rotors. In an oil-free compressor, special coatings and seals are used to prevent air leaks. The revolution of the screws forces air through the chambers.

How does an oil-free rotary screw air compressor work?

An oil-free (or oil-less) rotary screw air compressor uses a two-stage compression process. Air passes through an intercooler between compression stages to bring temperatures down and prevent overheating. Oil-free rotary screw air compressors eliminate any oil carryover, producing very clean air.
