What is a down-the-hole drill?

A down-the-hole drill, usually called DTH by most professionals, is basically a jackhammer screwed on the bottom of a drill string. The fast hammer action breaks hard rock into small cuttings and dust that are evacuated by a fluid (air, water or drilling mud). The DTH hammer is one of the fastest ways to drill hard rock.

What is down-the-hole (DTH) drilling?

Down-the-hole (DTH) drilling has made it easier for contractors to drill wells faster and more efficiently, and to transition from dirt boring to rock boring just by adding a compressor and hammer to the drill bit.

What is down-the-hole hammer drilling?

In addition to its use in mining, construction, geothermal exploration, and water well drilling, down-the-hole hammer drilling is also employed in the oil and gas industry for wellbore drilling. This method allows for faster and more efficient drilling through hard rock formations, reducing overall project timelines and costs.

How do you drill a hole in a rock?

1. Clean the rock surface thoroughly 2. Use a permanent marker to mark your drilling points precisely 3. For multiple holes, measure and mark all points before starting to drill 4. Consider using masking tape on smooth rocks to prevent the drill bit from slipping 1. Set your drill to the hammer or rotary setting if available 2.

How long does it take to drill a hole in a rock?

The time varies significantly depending on rock hardness, hole size, and tools used. A small 1/4" hole in river rock might take 2-5 minutes, while larger holes in granite could take 15-30 minutes or more. As noted in "Holey Stones" instructions, "Time varies. Depends on hardness and thickness of stone, and abrasiveness of burrs."

What is down-the-hole piling?

Down-the-hole piling refers to using DTH hammers for pile driving applications. By utilizing this technique, construction projects can achieve higher productivity and cost-effectiveness when compared to traditional pile driving methods.
