What is a down-the-hole drilling method?

The video shows the down-the-hole drilling method for very hard soil or rock. A rotary drilling rig, type LB 20, working with down-the-hole hammer inside a casing. A flushing current conveys the loosened drill cuttings upwards and exits at the upper end of the casing.

What is down-the-hole (DTH) drilling?

The document discusses Down-The-Hole (DTH) drilling. DTH drilling involves a mini jackhammer located behind the drill bit that breaks rock into small pieces. It is a fast way to drill hard rock and can drill holes up to 4500 meters deep. DTH drilling is commonly used for mining, exploration, water wells, geothermal applications, and construction.

How does a down-the-hole drill work?

In down-the-hole drilling a drill rod is fitted with a hammer at its lower end. The hammer, which is mounted on the drill bit, is activated through the addition of compressed air and driven into the ground - simultaneously rotating and impacting. A flushing current collects the loosened drill cuttings and conveys them upwards.
