Should I drill a hole in my gas tank?

There are a few reasons why you might want to drill a hole in your gas tank. Maybe you're looking to install a sensor or gauge and need access to the interior of the tank. Or maybe you're trying to vent the tank and need a way for air to escape. In either case, drilling a hole in the gas tank is a relatively straightforward process.

How to drill a gas tank?

First, you need to be sure that the tank is empty. If there is any gas left in the tank, it could explode when you start drilling. Second, you need to have the right type of drill bit. A standard metal drill bit will not be strong enough to penetrate the metal of the gas tank. Instead, you must use a high-speed steel or carbide-tipped drill bit.

What is a DTH drilling rig?

DTH drilling rig is a percussive rotary drilling rig. Its internal structure is different from general rock drilling rigs. Its gas distribution and piston reciprocating mechanism are independent. The front end is directly connected to the drill bit and the back end is connected to the drill rod.

What is a down-the-hole drilling method?

The video shows the down-the-hole drilling method for very hard soil or rock. A rotary drilling rig, type LB 20, working with down-the-hole hammer inside a casing. A flushing current conveys the loosened drill cuttings upwards and exits at the upper end of the casing.

How does a down-the-hole drill work?

In down-the-hole drilling a drill rod is fitted with a hammer at its lower end. The hammer, which is mounted on the drill bit, is activated through the addition of compressed air and driven into the ground - simultaneously rotating and impacting. A flushing current collects the loosened drill cuttings and conveys them upwards.

How do you drill a rock with a DTH hammer?

This method is mainly applied for hard to very hard rock and/or for penetrating large boulders. 1. Setting the DTH hammer with drill rod and casing on the drilling point. 2. Rotary and percussive drilling of the drill string under compressed air supply. 3. After reaching the final depth, unlocking of the drill rod with DTH hammer and pilot bit.

We have discussed the components of the drilling rig, now let's discuss the drilling process itself. An oil or gas well is drilled in a very ordered sequence.

Rig move is one of the big and hard operations on the drilling crew that need good planning, Learn more about its procedure & precautions.
