What is down-the-hole hammer drilling?

In addition to its use in mining, construction, geothermal exploration, and water well drilling, down-the-hole hammer drilling is also employed in the oil and gas industry for wellbore drilling. This method allows for faster and more efficient drilling through hard rock formations, reducing overall project timelines and costs.

What is a down-the-hole drill?

A down-the-hole drill, usually called DTH by most professionals, is basically a jackhammer screwed on the bottom of a drill string. The fast hammer action breaks hard rock into small cuttings and dust that are evacuated by a fluid (air, water or drilling mud). The DTH hammer is one of the fastest ways to drill hard rock.

What is a down the hole hammer?

One of the most commonly used tools in the drilling industry to meet such challenging scenarios is the Down the Hole Hammer (DTH hammer). DTH hammers are most used in hard rock formations and are designed to tackle complex tasks like drilling in populated areas without putting existing structures at risk.

Which drill hammer is best for deep-hole drilling?

Conquer deep-hole drilling with our hammers that have low air consumption and high rates of productivity. Mincon tooling has earned a reputation as the driller's choice around the world in geothermal hole and water-well drilling. What is DTH hammer drilling?

Our DTH hammer drilling expertise shines in various terrains, including the meticulous demands of foundation & geotechnical drilling, the rigorous intensity of blasthole quarry & mine drilling, and the precision of waterwell & geothermal boreholes.

Where is the hammer located in DTH drilling?

In DTH drilling, the percussion mechanism - commonly called the hammer - is located directly above the drill bit. The drill pipes transmit the necessary feed force and rotation to the hammer and the bit, along with the fluid (air, water or drilling mud) used to actuate the hammer and flush the cuttings.
