

Drill batteries to power camera rig

How do I power my mobile compact camera rig?

There are many lightweight options to power your mobile compact camera rig, especially since a smartphone, action camera, or small gimbal camera doesn't require a lot of power to keep their relatively small, built-in batteries charged. Power banks: The easiest method is by using a power bank.

What is a camera battery?

These batteries, normally reserved for much larger camera setups, typically provide all-day power to a DSLR or mirrorless camera rig.

How do I choose a battery plate for a small rig?

Shoe/cage/rod-mounted battery plates: Keeping your rig compact is important, so utilizing a battery plate that can be mounted directly on your camera or rig, such as a battery plate with a cable or dummy battery output can be a great addition to your small rig.

Does a car battery add weight to a rig?

It won't add much weight to your rig. However, make sure not to power large-capacity gear with your car battery if you want to drive it later. If you're using a DSLR or mirrorless camera, or even a compact camcorder, they have incredible image quality but tend to have abysmal battery life, by default.

Can I use multiple batteries to power a rig?

You can group multiple V-mount or Gold mount batteries to power equipment with stations such as the POWERANGE V-mount station or by using a Block Battery power pack. Mobile battery choices should not add too much to your existing rig, though in some cases heavier batteries are a bonus, because they can also be used for counterweight.

Can I use a dummy battery to power my camera?

Plates or monitors with power output via cable or dummy battery: Check to see if your accessories have a power output, such as the Feelworld HDMI monitor with a dual L-series battery plate--if they utilize larger-capacity batteries than your camera, you can also use its larger battery capacity to power your camera.

Power your Blackmagic Design Pocket Cinema Camera 4K with this 95Wh V-Mount Battery Kit from IndiPRO Tools. Included in the kit are a Compact ...

The kit includes a 98Wh Micro-Series V-mount lithium-ion battery, a V-mount battery plate with 15mm rod mount, a coiled D-Tap to 2-pin camera power ...
