

Drill line change on workover rig video

How do you replace a drilling line?

Keep heat sources such as welding/cutting away from the drilling line. Slip drilling line after a predetermined ton-mile point or use is reached. Follow slip and cut safety procedures for replacing the drilling line and follow these guidelines: Use a string grip or snakeskin between the catline (old drilling line) and new drilling line.

What if my rig goes down?

An error occurred while retrieving sharing information. Please try again later. When your rig goes down and you need to swap out and replace a drill line, tubing line, or a sand line, we send out one of our mobile spooling units operated by an expert technician with the correct pre-measured cable.

What should I do if a drilling line is dragged?

Check areas where drilling line may have been dragged over sharp edges or rough surfaces. This can be avoided by installing protective roller and guide sheaves. Keep heat sources such as welding/cutting away from the drilling line. Slip drilling line after a predetermined ton-mile point or use is reached.

How do you replace a catline drilling line?

Follow slip and cut safety procedures for replacing the drilling line and follow these guidelines: Use a string grip or snakeskin between the catline (old drilling line) and new drilling line. This will allow either line to twist and turn without passing the twist to the other line. Be sure that the grip is secure.

How do you cut a drilling line on a cable shark?

Use the Cable Shark remote control device to cut the drilling line. This removes the safety hazard of having rig employees injured by cutting the open and exposed drilling line. 13. Thread the drilling line downward until the old cut drilling line falls out of the Cable Shark unit. 14.

What type of cable is used for drilling rigs?

Horizon cable offers drill line in both import and domestic in 1" - 1 3/4" diameter with continuous lengths up to 10,000 feet. Tubing Line is primarily used on well servicing rigs and workover rigs in oilfield applications. This wire rope is a 6 x 26 construction offering flexibility, resistance to crushing and outstanding wear a fatigue.

Service life of drilling lines can be increased dramatically by following a planned cut-off program based on work performed. In this reference document you will learn the guidelines for correctly ...

Follow slip and cut safety procedures for replacing the drilling line and follow these guidelines: Use a string grip or snakeskin between the catline ...

Drill line change on workover rig video

In this video, Jason, one of our Lifting Specialists out of Oklahoma City, takes us on site of an oil rig that had a sand line break during operation.

Never weld the new drill line to the old drill line. Try to install the new drill line at a point in the drilling operation when there is a considerable amount of weight available to help seat (break ...
