How do you calculate drilling cost?

Example: Determine the drilling cost (CT), dollars per foot, using the following data: Basic Formulas 29
Bit cost (B) = \$2500 Rig cost (C,) = \$900/hour Rotating time (T) Round trip time (T) (for depth-1 0,000 ft)
Footage per bit (F) = 65 hours = 6 hours = 1300ft 2500 + 900(65 + 6) 1300 c, 66,400 1300 C, =- C, = \$51.08 per foot

Why should you use a PDF drilling calculations data handbook?

Ideally, the PDF of the drilling calculations data handbook is user-friendly. It provides conversion factors for various units, including specific gravity and API degrees. Secondly, In the drilling calculations handbook PDF drill string standard section, you can get the following: Drill pipes inspection standards.

How do you calculate drilling fluid density?

Metric calculations Drilling fluid density, kg/l = pressure gradient, badm Drilling fluid density, kg/l = pressure gradient, bar/10m +0.981 0.0981 Basic Formulas 3 S.I. units calculations Drilling fluid density. kg/m³ = pressure gradient, kPa/m x 102 Hydrostatic Pressure (HP) Hydrostatic pressure using ppg and feet as the units of measure

When was the drilling calculations data handbook first released?

The original version of the Drilling Calculations Data Handbook PDF was first distributed in 1950. Since then, there have been eight additional releases, including numerous new advancements and equipment. However, the main objective of the handbook has always been to remain user-friendly and accessible.

How do you calculate drill pipe capacity?

Calculate the drill pipe capacity, open-end displacement, closed end displacement, annular volume, and total volume for the following condition: 5,000 feet of 5" drill pipe with an inside diameter of 4.276" inside a hole of 5.5" . The calculations are based on one fluid. Weight of material in air . . . , Buoyancy = x Fluid density.

How much does a rig cost?

Bit cost (B) = \$2500 Rig cost (C,) = \$900/hour Rotating time (T) Round trip time (T) (for depth-1 0,000 ft)
Footage per bit (F) = 65 hours = 6 hours = 1300ft 2500 + 900(65 + 6) 1300 c, 66,400 1300 C, =- C, = \$51.08 per foot ~- __~ Temperature Conversion Formulas Convert temperature, Fahrenheit (F) to Centigrade or Celsius (C)

This document discusses rig site calculations performed by site supervisors for drilling operations. It lists 25 types of calculations supervisors perform, ...

This document provides an overview of basic drilling calculations including length, weight, area, volume, density, discharge, pressure, torque, velocity and ...

3-1. Introduction A number of commercially available drill rigs and accessories are satisfactory for performing conventional drilling and sampling operations or for conducting in situ tests. ...

This handbook was prepared by Wellbore Integrity Solutions DRILCO engineers to help rig personnel with technical questions, provide recommendations and help the rig crew to ...

Drilling Formulas Spread Sheet V1.7 is the latest version of Drilling Formula Spread Sheet. There are few new cement plug formulas and all ...

Some use it as a secondary reference source: others use it as their primary source for formulas and calculations; still others use it to reduce the volume of materials they must carry to the rig ...

These are drilling and calculation sheets (Microsoft Excel sheet) in the drillingformulas . This is one page summary so you can download and use them easily.

Drilling Formulas Spread Sheet V1.7 is the latest version of Drilling Formula Spread Sheet. There are few new cement plug formulas and all formulas are unlocked so you ...

The document outlines various calculations and formulas used by HSE engineers for drilling rig and workover operations, including man-hours, TRIR, LTI rate, and noise dose calculations. It ...

This document discusses efficiencies and factors that must be considered when sizing rig components for drilling operations. It defines transmission, drive, and ...

This book presents the theory and technologies of drilling operations. It covers the gamut of formulas and calculations for petroleum engineers that have been ...

From the entry-level roustabout to the supervisory-level drilling engineer, understanding the key drilling formulas is essential for making ...

The document discusses procedures for running carbide and rice tracers to check actual downhole volume and lag times against theoretical calculations, correcting lags if differences ...

1.4 Hydrostatic pressure calculations using density Although some companies do operate using pressure gradients for fluids, other companies in the oilfield use density, so it is important to ...
