Serious incidents associated with deepwater drilling operations and challenging environmental conditions such as high currents highlight the significant risk of unplanned incidents involving ...

Drift-off is a scenario of the vessel drifting away after a loss of thruster power, while drive-off is of the vessel being pushed away by excessive thruster force. Drift-off and drive-off ...

Drive-off, drift-off, and force-off are three basic failure modes for DP vessel loss of position. Though statistics imply relatively high frequencies of loss of position for DP vessels in general, ...
