The Deepwater Titan is the world's first drillship delivered with two 20,000-psi BOPs, well-control, riser, and piping systems for high-pressure and ...

In an effort to shed some light on the process, we'll focus on modern drillships and semisubmersible drilling rigs and their differences. Drillships are ...

Drillships are maritime vessels designed specifically for drilling deepwater and ultra-deepwater oil and gas wells. These ships are equipped with advanced drilling equipment and ...

For the last 40 years of drilling rig and drilling equipment development it has been defined by moving the equipment and the operators to the next level of machinery and ...

Like semi-submersible drilling rigs, drill ships are kept on location during drilling operations with the use of a system of dynamic positioning thrusters. As ...

OverviewDesignHistoryApplicationTypesDrillship operatorsDrillships are just one way to perform various types of drilling. This function can also be performed by semi-submersibles, jackups, barges, or platform rigs. Drillships have the functional ability of semi-submersible drilling rigs and also have a few unique features that separate them from all others, first being the ship-shaped design. A drillship has greater mobility and can move quickly und...
