What is an eds on a moored vessel?

An EDS is optional for moored vessels. The EDS is a programmed sequence of events that operates the functions to leave the stack and controls in a desired state and disconnect the lower marine riser package (LMRP) from the lower stack. The number of sequences, timing, and functions of the EDS are specific to the rig, equipment, and location.

What happens if a drilling rig fails during an emergency disconnect?

Failure during an emergency disconnect procedure may result in damages to the rig, riser, wellhead, and, in worst case, an uncontrolled subsea blowout. Emergency disconnection may occur at any time in dynamic positioning drilling rigs, as a result of a sudden blackout or by a quick drive-off, for instance.

What is an EDS in a BOP stack?

An EDS shall be available on all subsea BOP stacks that are run from a dynamically positioned vessel. An EDS is optional for moored vessels. The EDS is a programmed sequence of events that operates the functions to leave the stack and controls in a desired state and disconnect the lower marine riser package (LMRP) from the lower stack.

What causes emergency disconnection in dynamic positioning drilling rigs?

Emergency disconnection may occur at any time in dynamic positioning drilling rigs, as a result of a sudden blackout or by a quick drive-off, for instance. Because of that, all emergency procedures should be well understood by both DP and drill floor personnel.

What is eds in ssbop?

EDS ensures the integrity of the riser and the related equipment, particularly the SSBOP stack, connectors, and conductor pipe that provide well pressure containment. The disconnect times are governed by exceedance of limits on top riser angle, bottom riser angle, slip joint stroke, wellhead moment, and conductor moment.

What happens if a DP drilling unit fails?

In consequence of such event, the DP drilling unit must be able to rapidly shut in the well and disconnect the BOP. Failure during an emergency disconnect procedure may result in damages to the rig, riser, wellhead, and, in worst case, an uncontrolled subsea blowout.
