

Electric air compressor disassembly and assembly video

How do you rebuild an air compressor pump?

Rebuilding the air compressor pump restores the pump's ability to efficiently compress air. If the tank won't build pressure because the pump seals or valve plate are worn, rebuild the pump using the manufacturer-approved air compressor parts. Most air compressor models use a kit for rebuilding the air compressor pump.

How to start an air compressor?

1 As with all power equipment, always wear safety glasses and closed toe shoes. 2 Make sure the air compressor is on a flat surface, and check the pump oil level before each use. 3 Next, connect the air hose to the regulator valve and the power tool to the hose. 4 Now you are ready to start the air compressor.

How does an air compressor pump work?

The air compressor motor drives a piston that compresses air in the pump cylinder to fill the compressor tank. Worn pump parts-- such as the valve plate and seals--stop the pump from compressing the air and filling the tank. Rebuilding the air compressor pump restores the pump's ability to efficiently compress air.

Do air compressors need a rebuild kit?

Most air compressor models use a kit for rebuilding the air compressor pump. The rebuild kit includes the cylinder sleeve, piston and seals. Follow the steps in this repair guide and video to install the air compressor pump rebuild kit on Craftsman, Porter Cable, DeWalt and Devilbiss air compressors.

How do I remove air pressure from my air compressor?

01. Unplug the air compressor's power cord from the wall outlet. Pull the ring on the safety valve to drain all air pressure from the tank. Wear work gloves to protect your hands. PHOTO: Unplug the power cord.

How do you shut down an air compressor?

When you are ready to shut the air compressor down, move the lever on the pressure switch to the "OFF" position, unplug the unit and disconnect the air hose. 8 Drain the air from the tanks by releasing air with the pressure relief valve.
