

Encana drilling rigs

Where does Encana drill in the Permian Basin?

Encana operates exclusively in the Midland Basin, the largest of the Permian sub-basins. Its leaseholds are spread across a half-dozen West Texas counties, including Midland, Howard, Martin, and Glasscock. Encana drills on a given pad, with the number of wells drilled depending on the size of its acreage and its non-contiguous nature.

How many natural gas rigs does Encana have?

Encana tested its first natural gas-powered rig in the United States in 2005. With the success of that initial test, we have expanded our portfolio, both in the United States and Canada, with 16 natural gas-powered rigs running this summer in Encana's field operating areas. Two additional gas-fired rigs are planned by year's end.

Is Encana developing a shale cube?

Encana (ticker: ECA) released an update to its Permian operations today, outlining the company's current practices in the world's most popular shale play. Instead of drilling a few wells in a given section then returning later to infill drill, Encana is "developing the cube."

What kind of natural gas does Encana use?

Among the natural gas-powered rigs Encana is operating, six use dual-fuel technology and 10 have dedicated natural gas engines. The source or type of natural gas used as a fuel also varies. Twelve of the rigs use field gas produced from the fields in which they are drilling.

How much of Encana's CAPEX will go to Permian?

More than half of the company's CapEx will go to the Permian, and the company expects to drill about 140 wells in the basin this year. Over the next five years Encana expects its Permian production will grow 3-4x, with a five year CAGR of 30%.

How many drilling rigs use natural gas?

Twelve of the rigs use field gas produced from the fields in which they are drilling. Four use liquefied natural gas because of limited natural gas distribution availability in the field, or the need to supply fuel that is highly mobile because of frequent rig moves or short drilling cycles.

Separately, Encana's second-quarter production in the Permian averaged a record 104,000 boe/d, of which 84% was oil and condensate. Encana plans to complete 2019 using ...

Encana used "fit-for-purpose" rigs to drill 52 wells on a single pad that covers 4.2 acres of land. Multi-well pad drilling reduces production costs, reduces cycle times, and optimizes production.
