

Engineering drill handle

What is a drill handle used for?

The drill handle is used, e.g., on drills requiring high feed forces. This handle is placed in the rear of the tool allowing the use of a high grip. On, e.g., pulse tools where feed forces are normally low, the handle is moved forward placing the center of the tool weight directly above the handle.

How long should a drill handle be?

For ease of movement and to minimize loading of the wrist the tool should be kept short with the center of balance where the tool is gripped. Keeping the distance between hand and workpiece as short as possible speeds up precision tasks. For drilling, a handle diameter of 38 mm should be used.

How to make a handle for a K drill?

I agree K'drill does not offer a ready to purchase handle, but one can easily fabricate an adapter and handle. The K-drill is already drilled for a cross pin. Take a handle section from any old beat up hand auger. The one in the pic is a 5 inch hand laser but it really doesn't matter. Cut off the entire handle section and drill a cross hole.
