What are heat exchanger replacement parts?

Heat exchanger replacement parts are used to maintain, install, or repair heat exchangers. They include replacement tube bundles, plates, and other parts that keep heat exchangers operational. When it comes to Heat Exchangers, you can count on Grainger.

How a heat exchanger can reduce industrial production cost?

Heat exchanger can realize heat transfer between two or more medium with different temperatures, conducive to reducing industrial production cost. Heat exchanger transfers heat from the higher temperature fluid to the lower temperature fluid, so that temperature reaches technology standard and meet needs of process conditions.

What are heat exchangers used for?

Heat exchangers, as the name suggests, are devices that transfer heat from one place to another. There are various types of heat exchangers which have different applications. Usually, we use them for power stations, cooling, refrigeration, space heating, etc. Depending on their design and material, heat exchangers can operate with different fluids.

What is an immersion heat exchanger?

Immersion heat exchangers are thin panel-style heat exchangers with a large surface area that are lowered into a tank or pool of fluid and transfer heat from one fluid to another. Heat exchanger replacement parts are used to maintain, install, or repair heat exchangers.

What are the different types of heat exchangers?

According to the direction of flow channel, heat exchangers can be divided into counter-flow heat exchangers and cross-flow heat exchangers. According to the heat exchange medium, there are air to air heat exchanger, water to air heat exchanger, water to water heat exchanger, air to water heat exchanger, oil to water heat exchanger, etc.
