What are oil and natural gas drilling rigs used for?

In the background are the Discoverer Enterprise, GSF Development Driller II, and Helix Producer I. Oil and natural gas drilling rigs are used not only to identify geologic reservoirs, but also used to create holes that allow the extraction of oil or natural gas from those reservoirs.

How does a natural gas drilling rig work?

A natural gas drilling rig is a complex industrial machine used to extract natural gas from underground reservoirs. The process begins with selecting a drilling location, usually based on geophysical surveys and existing geological data.

What is a drilling rig?

The term "rig" therefore generally refers to the complex equipment that is used to penetrate the surface of the Earth's crust. Small to medium-sized drilling rigs are mobile, such as those used in mineral exploration drilling, blast-hole, water wells and environmental investigations.

What is a land based drilling rig?

Land-based rigs are designed to drill wells on solid ground. These rigs are mobile and can be transported to remote locations. They are commonly used for drilling shallow to deep wells in oil and gas fields. Conventional Drilling Rigs: Conventional land drilling rigs feature a fixed derrick or mast and are ideal for prolonged drilling operations.

What type of drilling rig is best for oil & gas?

They are commonly used for drilling shallow to deep wells in oil and gas fields. Conventional Drilling Rigs: Conventional land drilling rigs feature a fixed derrick or mast and are ideal for prolonged drilling operations. They can drill deeper and larger diameter wells and provide a stable platform for drilling operations.

How are drilling rigs classified?

Drilling rigs are classified based on multiple factors like Drawworks horse power, maximum load capacity, drilling depth capacity, location they drill or specific type of operations they can perform. A Blow Out Preventer commonly known as BOP is a large valve placed on top of a well. As the name suggests, BOP is used to prevent a blowout in a well.
