What is a geothermal drill rig?

Drilling Supply's Geothermal Drill Rigs were specially designed and manufactured for geothermal, water well and construction drilling. They are highly reliable and offer the drillers and contractors the most efficient and safe geothermal drilling experience.

What is a geothermal rig used for?

Some of the most notable applications include: Geothermal drilling rigs can be used to access geothermal resources for direct use applications, such as space heating, greenhouse heating, and industrial processes. By drilling wells to access hot water or steam, geothermal energy can be used to meet a variety of thermal energy needs.

Do geothermal rigs need high temperature?

High-temperature capability: When drilling geothermal wells, it is clearly necessary that any of the rig's downhole or surface equipment that will be exposed to high temperature has that capability. This may be especially noticeable in drilling fluid returns, which will probably be much hotter than in conventional drilling.

How do I choose a geothermal drilling rig?

While geothermal drilling tends to prioritize overall rig size and weight, drilling speed, and cost per foot, options such as sandline winch or pipe spinner systems can be added to minimize equipment on your geothermal drilling job site. DM250: drill rigs for sale suited for residential geothermal drilling or small commercial jobs.

Which geothermal drilling rigs are best for muddiest job sites?

Easily navigate your muddiest job sites with Versa-drill's compact, all-wheel drive geothermal drilling rigs.

What is a track-mounted geothermal drilling rig?

The track-mounted geothermal drilling rig easily maneuvers on site and preserves the option for continuous sampling to characterize the subsurface, improving geothermal well design and construction. Minimize your geothermal development time and site clean-up costs by casing holes quickly without drilling mud using sonic.
