What is a diamond core drilling rig?

A diamond core drilling rig, also known as a Hardrock diamond core drilling rig or geotechnical drilling rig, is used for exploration for metal and non-metal solid mines, as well as engineering, hydrogeology, oil and gas general survey / investigation.

How does drilling in hard rock affect construction & mining projects?

Drilling in hard rock presents a unique set of challenges that can significantly impact the efficiency and cost-effectiveness of construction and mining projects. Drilling in hard rock can cause rapid wear-and-tear on drill bits due to the abrasive nature of the rock formations.

What is hard rock drilling & why is it important?

Drilling in hard rock conditions requires specialized equipment that can withstand the extreme stress and abrasion of the environment. Drilling in hard rock can generate significant vibrations and stress on equipment. Reinforced frames and mountings help absorb these forces, reducing the risk of structural failure.
