Who built the first offshore drilling rig?

1896-1897 -Offshore Drilling Part II: The first - "offshore" rig was constructed by Henry L. Williams of California's Summerland Community fame. For this first exploration into drilling underwater, H.L. Williams built a 300-foot pier and mounted a cable tool rig onto it, and into the Santa Barbara Channel in California.

When did offshore drilling start?

Until an innovative Kerr-McGee drilling platform in 1947, no offshore drilling company had ever risked drilling beyond the sight of land. Many of the earliest offshore oil wells were drilled from piers at Summerland in Santa Barbara County, California. Circa 1901 photo by G.H. What is offshore drilling?

Offshore drilling typically refers to the discovery and development of oil and gas resources which lie underwater. Most commonly, the term is used to describe oil extraction off the coasts of continents, though the term can also apply to drilling in lakes and inland seas.

How has the offshore drilling industry changed over 50 years?

The offshore drilling industry has had spurts of construction and design improvement over its 50-year history. The first was the conception of the MODUs in the mid-1950s, followed by a mild building period in the mid-1960s. In the early 1970s, there were significant numbers of jackups and semisubmersibles built.

When was the first offshore oil rig built?

A winter storm in 1903 destroyed many of the derricks. The remnants of America's pioneering offshore rigs were wiped out by a strong tidal wave in 1942. America's first offshore oil field consisted of wooden piers in shallow water at Summerfield near Santa Barbara, Calif. The photo was taken before 1906.

When did oil rigs become a business?

Before the leasing of oil and gas rights in 1955, oil companies cored with small rigs cantilevered over the side midship of old World War II barges. These barges did not have well-control equipment or the ability to run a casing program.
