

How much does a German electric air compressor cost

How much does compressed air cost per cubic meter?

An example of calculating the cost per cubic meter of compressed air for an oil-injected screw compressor: The average energy costs for 1m³ of compressed air range between 3 and 5.4 cents. These costs can vary depending on electricity prices and the compressor's specific performance.

How do I calculate the cost of generating compressed air?

To manually calculate the cost of generating compressed air (in terms of electrical power consumption), follow these steps and use the following formula: Determine energy usage: Start by finding the energy consumption of your air compressor, usually provided in kilowatts (kW).

How do you calculate the cost of a compressed air compressor?

When calculating the cost of compressed air, it's important to look beyond the initial capital expense for the compressor. For industrial compressors -- such as reciprocating, rotary vane and rotary screw air compressors -- the initial purchase price is only a fraction of the total cost of ownership (TCO).

What are the costs of a compressed air system?

The costs consist of several components: Energy costs: The largest cost block. They are incurred by the power consumption of the compressor. Acquisition costs: Costs for the purchase and installation of the compressed air system. Maintenance costs: Regular maintenance and repairs to maintain the system's efficiency.

How do I calculate the cost of 1m³ of compressed air?

To calculate the total cost for 1m³ of compressed air, all these factors must be considered. An example of calculating the cost per cubic meter of compressed air for an oil-injected screw compressor: The average energy costs for 1m³ of compressed air range between 3 and 5.4 cents.

How much does an air compressor cost per year?

The air compressor that they have is a 100 hp rotary screw. The electrical rate for this facility is at \$0.08/KWh. With these factors, the annual cost can be calculated by Equation 1: $100\text{hp} * 0.746 \text{ KW/hp} * 1,000\text{hr} * \$0.08/\text{KWh} / 0.95 = \$6,282$ per year.

The cost of operating an air compressor, including electricity expenses, can be significant during its own life. Generally, operating costs can make up 76% of the total cost, compared to 12% ...

When discussing the cost of compressed air, it's worth mentioning that electrical energy makes up most (80%) of your compressor-related expenses.

As an average, EXAIR uses 4 CFM/hp of air compressor when speaking with customers who would like to
