How much does an industrial air compressor cost?

How Much Does An Industrial...Depending on the output capability the average cost of an industrial air compressor is \$36,500 with prices ranging from \$1,000 for a 5HP reciprocating air compressor to \$70,000 for a 200HP air compressor for the US according to CostOwl.

Are the least expensive compressors a good deal?

As a rule of thumb, the least expensive compressors are generally not very energy efficient, which means that they cost more in the long run. This only makes them a good deal in the few cases where the compressor is rarely used. In most other cases, the best way to save money over time is to limit compressor operating costs.

How much does compressed air cost per year?

With these factors, the annual cost can be calculated by Equation 1: $100\text{hp} * 0.746 \text{ KW/hp} * 1,000\text{hr} * \$0.08/\text{KWh} / 0.95 = \$6,282$ per year. In both equations, you can substitute your information to see what you actually pay to make compressed air each year at your facility.

What should you consider when buying a compressor?

Most of it, approximately 80% of the TCO, can be attributed to energy expenses and the rest to maintenance. This means that the worst thing one can do when buying a compressor is to only look at the purchase price without factoring in the follow-up costs.

Are all compressor maintenance costs the same?

Not all compressor maintenance costs are the same, and so, it may be worth checking before selecting a compressor and comparing the maintenance costs down the line. Included in the maintenance part of the equation is the cost of the spare parts for regular maintenance and parts costs for emergency repair.
