

# How to adjust the pressure of Xinlei screw air compressor

How to adjust air compressor cut-in pressure?

First of all, turn off your air compressor. To adjust the cut-in pressure, turn the big set screw on the pressure switch clockwise to increase the pressure and anti-clockwise to decrease the pressure. Now, adjust the differential pressure switch to change the cut-out pressure.

How do you adjust a compressor motor?

Turn the cut-in adjustment screw using a screwdriver to set the cut-in pressure. Rotate the screw counterclockwise to make the compressor motor turn on at a lower pressure. Turn the screw clockwise to make the motor turn on at a higher pressure.

What are the different settings for an air compressor switch?

There are typically two types of settings for an air compressor switch. They are cut-in and cut-off/out settings. Cut-in is the pressure point at which the air compressor starts operating. On the other hand, the cut-out pressure point is the opposite of that.

Can a compressor pressure switch be adjusted?

compressor pressure switch type. Some pressure switches can only be adjusted when under pressure. Don't turn any of the screws when there is zero pressure in the tank, or when you just get your new pressure switch out of the box. Always check the manual, just to be sure.

How do you turn a compressor off?

Twist the cut-out adjustment screw with a screwdriver to set the cut-out pressure. Turn the screw clockwise to raise the pressure at which your compressor's motor shuts off. Rotate it counterclockwise to make the motor turn off at a lower pressure.

What psi should a compressor be set at?

But, you always want the compressor to supply more flow than needed to account for any pressure loss in the system. Therefore, your compressor should be set at roughly 100-130 PSI for the cut-in and cut-out pressures respectively. Ensure you check your manual for recommended pressures or contact the manufacturer.
