

How to convert a crane into a down-the-hole drill

How does a down-the-hole drill work?

Down-the-hole drills consist of various components such as hammers, bits, and pipes that work together to create boreholes. The hammer delivers rapid blows to the bit, while air pressure removes debris from the hole. These tools are designed to withstand high-impact forces and provide exceptional performance in challenging environments.

What are the advantages of using down-the-hole drilling tools?

The advantages of using down-the-hole drilling tools are numerous. They offer faster penetration rates and lower energy consumption compared to other methods, making them ideal for large-scale projects. Additionally, DTH drills are versatile and can be used in a wide range of geological formations, from soft soil to hard rock.

How long did it take to drill a 12,000 ft hole?

The original estimate for completion of a 12,000-foot hole was 30 days using the conventional rotary technique, which was reduced to 13 days using the DTH method. Before DTH was used, drillers would typically case the vertical portion of the well and convert to rotary drilling to drill at a tangent.

Why is DTH drilling better than rotary drilling?

DTH drilling is often favored over rotary drilling for its ability to penetrate hard rock formations more effectively. This method is also preferred when precision and accuracy are crucial, as the hammer impact allows for a controlled and consistent drilling process.

How effective are DTH drilling tools?

DTH drilling tools are designed with unique features that make them highly effective in penetrating hard rock formations. These tools are equipped with down-the-hole hammers and bits that deliver powerful impact force to efficiently break through challenging geological formations.

How fast can you drill a well with DTH?

With DTH, it was now possible to turn 2-4 degree curves and drill the well's tangent up to 30 degrees or greater averaging 300 feet per hour, where rotary drilling would progress 30-40 feet per hour.
