

# How to disassemble the driven gear of rock drill

How do you disassemble a drill?

Put on safety goggles to shield your eyes from debris or small parts that may fly off. Remove the battery or unplug the drill from the charger to prevent accidental activation. Double-check that the drill is completely powered down before starting the disassembly. Avoid forcing parts apart; gentle pressure is often sufficient to disassemble.

How to reassemble a cordless drill?

Reassembly can be just as critical as disassembly to ensure your drill works properly. Follow these steps carefully to reassemble your cordless drill effectively: Clean all the components: Before reassembling, ensure all parts are free of dirt and debris to prevent any issues.

What should you wear when disassembling a drill?

Work Gloves: It's essential to protect your hands while disassembling the drill, so wearing work gloves will prevent injuries and provide a better grip on components. Safety Goggles: Safety goggles are crucial to shield your eyes from any debris or small parts that may come loose during the disassembly process.

How do you reassemble a drill?

Reverse disassembly steps: Begin reassembling the drill by following the disassembly steps in reverse order. Carefully attach each part according to how it was removed. Tighten screws securely: Make sure to tighten all screws securely but avoid over-tightening, as it can damage the components.

How do you reassemble a gearbox?

Remove the Gearbox Screws: Identify and unscrew the gearbox assembly. Lift Off the Gearbox Cover: Be careful of any small components that may fall out when lifting it off. Inspect all components, such as the trigger, internal wires, and any safeties. Gently remove them if they need servicing, documenting their placement for reassembly.

How do you remove a spindle from a gear box?

Squeeze spring (5) together at the bottom side of lever (1) and remove lever from gear box cover. Remove O-ring (3).
