

# How to draw simple accessories of down-the-hole drill

What is a down hole drill used for in drilling?

A down hole drill, or DHD, is used to drill overburden and rock. Casing bits and reamers are used to drill the initial holes for installing casing and to provide an annulus for grouting. The following instructions are for a stabilizer to be used. If a stabilizer is not required, use a drill pipe from the carousel in its place.

How are simple holes shown on engineering drawings?

Simple holes are shown on engineering drawings by stating the diameter and the depth of the hole. For example, a 20 diameter hole that goes straight through the component would be represented as "∅20 Through". Holes that go all the way through the component are known as through holes.

How do I use the drill down technique?

Work together using the Drill Down technique to separate your complex problem into smaller units, which can be solved appropriately as you uncover the factors contributing to the problem. Here are some ideas that can be pursued on the job, with some coordination. Use these reflective questions to gain more from your learning experience:

How do you drill a blind hole?

For a drilled hole, the shape of the bottom of the hole will be determined by the drill tip angle. If the hole is created by a process called 'boring' or by a tool with a zero tip angle, the bottom of the hole will be flat. These two types of blind hole drilling are shown in the drawing below: What Is a Counterbored Hole?

What is the bottom view of a drilled hole?

The bottom view is what we would see if we cut the top view in half along the "A" section line. The shape of the bottom of the hole is determined by the tool used to create the hole. For a drilled hole, the shape of the bottom of the hole will be determined by the drill tip angle.
