

How to fix the air compressor handle video

What happens if your air compressor goes wrong?

When something goes wrong with your air compressor, it can result in lost work time and profitability. Here's a look at the most common air compressor problems and some fixes you can try yourself to get up and running again. First, if your compressor has a reset switch, try that.

How do you fix a bad air compressor?

Here are a few more air compressor problems and some things to try on your own to fix them: Oil in reservoir has a milky appearance: air intake needs to be less humid to reduce air in the oil. Compressor vibrating too much: tighten mounting bolts, and make sure the surface is level.

Do air compressors need repair?

Having one opens up new possibilities for expanding your tool kit since they're used to operate nail guns, paint sprayers, inflators and more. However, like most power tools, even the most reliable air compressor will likely need repair occasionally. One of the most common repairs for an air compressor is when the unloader valve stops working.

What if I can't solve my air compressor problems?

If you aren't able to solve your air compressor problems, including anything not mentioned above, we welcome the opportunity to have a look at your machine. Call Antler Pumps at 212-534-2500, or schedule an appointment online with our easy contact form.

How do I Keep my air compressor running smoothly?

To keep your air compressor running smoothly, follow these steps: Regularly check and change the air filter to prevent dust buildup. Drain the air tank to remove dampness and prevent rust. Oil the moving parts according to the manufacturer's recommendations. Schedule professional maintenance checks to identify potential issues early on.

How do you fix a leaking air compressor?

Mix up a solution of liquid soap water and apply it around the fittings of the compressor. If there is a leak, you will see bubbles. Power off the compressor and allow the tank pressure to settle. Use Teflon tape to seal the fittings from where the bubbles are forming. Reattach and tighten all the fittings and restart the compressor to refill.
