

How to fix the vehicle-mounted air compressor

How do I remove the air compressor from my car?

Remove the black plastic panel under the engine. There are three panels under the car, but you only need to remove the first panel right after the front bumper. Once you remove the panel, you will see the air compressor right behind the front bumper, underneath the headlight on the passenger side. You do not need to remove the front bumper.

How do you fix a bad air compressor?

Here are a few more air compressor problems and some things to try on your own to fix them: Oil in reservoir has a milky appearance: air intake needs to be less humid to reduce air in the oil. Compressor vibrating too much: tighten mounting bolts, and make sure the surface is level.

What if I can't solve my air compressor problems?

If you aren't able to solve your air compressor problems, including anything not mentioned above, we welcome the opportunity to have a look at your machine. Call Antler Pumps at 212-534-2500, or schedule an appointment online with our easy contact form.

How do you fix an air compressor that leaks?

To fix an air compressor that doesn't build tank pressure, tighten loose air tube fittings to prevent air leaks. If the pressure switch fails to shut off the air compressor at the cut-out pressure setting, the safety valve may pop open to relieve excessive air pressure. Replace the safety valve if it leaks air constantly. Worn pump seals can also prevent the pump from compressing air.

How do I fix a clogged air compressor?

Flush it with an AC-compatible flush kit. Then flush the lines and evaporator. Rebolt the compressor to the engine and mount the AC lines using new gaskets or O-rings. Reconnect the clutch and any other electrical connections. Have a shop evacuate the air from the system and then recharge using an AC refrigerant scale.
