

Hpe universal drill rig

How do HPE drilling rigs work?

The HPE drilling rigs for ore pass development (up to 55 m), drilling of drain holes (up to 140 m) and reefboring (up to 30 m) use water operated DTH hammer technology. Holes are drilled from the bottom up and the drilling rigs are small enough to drill from a 3 m x 3,5 m tunnel, thereby eliminating the need for increasing the excavation size.

Why should you use HPE drilling rigs for incline tunnel development?

The HPE drilling rigs for horizontal development and incline tunnel development ensure faster drilling and have had a marked impact on safety due to the operator drilling from a safe and supported area. Water from the drifters are circulated back to the high pressure pump ensuring a closed loop system (dry hydropower).

Why do you need a drilling rig?

Making holes is part of our business. HPE supplies drilling rigs to conventional underground mines for horizontal tunnel development, incline tunnel development, ore pass development, vertical ventilation holes, silos and the drilling of drain holes and reef extracting holes (reefboring).

How does the HPE rock drill work?

This is done by using our latest technology in PLCs/variable speed drives/mechanical unloading systems/permanent magnet motors or a combination of some or all of the above. The HPE rock drill returns water back to the pump at max 20 bar, thereby allowing water to be "pushed" back into the pump suction line.

How do tunnel drilling rigs work?

Holes are drilled from the bottom up and the drilling rigs are small enough to drill from a 3 m x 3,5 m tunnel, thereby eliminating the need for increasing the excavation size. Underground Drilling Rigs - Horizontal & incline tunnel dev ensure faster drilling.

What is HPE underground mining & equipment?

Our Privacy Policy HPE underground mining machines & equipment operate on high pressure water, which is a clean powerful energy source, non-polluting and non-contaminating.
