

Jackleg drill

What is a jackleg drill?

Jacklegs are pneumatic rock drills that are attached to telescoping legs, which push the drill for the operator. The drill is relatively light weight requiring only one person to operate, this feature and their ability to drill in all directions allowed them to replace drifters and in some cases stopers in Bisbee mines.

Can a jackleg drill be used downward?

Downward drilling can be done, with a jackleg, it is best to detach the leg. The lack of places to hold the drill make hard especially when trying to pull the drill out of the hole. This often will require two people. After the drilling is completed the holes will need to be cleaned of water and cuttings.

How do you safely drill a jackleg?

Bit knocker Bit hammer / axe In line Oiler Rock drill oil Safety chain Air hose 1" ID Water hose 1/2" ID Safety glasses or eye shield Ear plug or muffs Before drilling is started the work area is made safe by barring down loose rock, checking for bootlegs, wetting down and examining for loosened timber. The jackleg is brought close to the face.
